

Ideation Phase

Brainstorm and Idea Prioritization

Date	02 October 2026
Student Name	Dhanyaa V S
Project Name	Automated Network Request Management in ServiceNow

Problem Statement:

Manual network request management can lead to processing delays, incomplete request details, approval difficulties, and limited request tracking.

Objective:

To automate the network request lifecycle using ServiceNow, from request submission and approval to task assignment and fulfillment.

Step 2: Brainstorming and Idea Listing

The following ideas were identified for solving the problem:

- Create a centralized Network Request catalog item.
- Design dynamic forms to collect relevant request details.
- Automate approval workflows using Flow Designer.
- Automatically create and assign network fulfillment tasks.
- Send email notifications to requesters and approvers.
- Track request status and maintain audit records.
- Configure access controls to protect request information.

Step 3: Idea Prioritization

The ideas were prioritized based on their importance to the project implementation:

Priority	Idea	Purpose
1	Network Request Catalog	Enable request submission
2	Dynamic Forms	Collect accurate information
3	Approval Automation	Ensure controlled approvals
4	Automatic Task Creation	Simplify fulfillment
5	Email Notifications	Provide timely updates
6	Status Tracking	Monitor request progress
7	Access Control	Restrict unauthorized access

Conclusion

Through individual brainstorming and idea prioritization, workflow automation was selected as the core approach for the project. The proposed solution uses ServiceNow features to simplify network request handling, improve tracking, and standardize approvals.
