

Ideation Phase

Empathy Map Canvas & Stakeholder Discovery

Date	02 October 2026
Student Name	Dhanyaa V S
Project Name	Automated Network Request Management in ServiceNow

1. Stakeholder Discovery Overview

This document captures the operational requirements, friction points, and target platform capabilities across core technical roles involved in the network request workflow. Analyzing these perspectives informs the architecture of the ServiceNow solution.

2. 360° Persona Analysis

PERSONA 01: Network Requester	End User / Developer / Remote Employee
Operational Role & System Interaction	
Submits provisioning requests for VPN access, Firewall rule modifications, Port enablement, and IP allocations via Service Portal catalog forms.	
Current Bottlenecks & Operational Risks	
- Unstructured submission via informal email threads causes lost or dropped requests. - Complete absence of real-time ticket stage visibility (Requested → Approved → Work in Progress → Closed Complete). - Manual follow-ups delay project deployment timelines.	
Target ServiceNow Capability	
- Service Catalog item (sc_cat_item) with dynamic variable sets for input validation. - Real-time RITM (sc_req_item) status tracking via Service Portal widgets and automated email alerts.	

PERSONA 02: Network Fulfillment Engineer

L2 / L3 Technical Specialist

Operational Role & System Interaction

Validates technical parameters, executes firewall rule policies, configures subnets, and manages tasks via ServiceNow Task Queues (sc_task).

Current Bottlenecks & Operational Risks

- Requesters omit crucial parameters (CIDR blocks, target ports, NAT rules), forcing back-and-forth communication.
- Fragmented task routing leads to unmanaged queues and SLA breaches.
- Manual spreadsheet tracking creates compliance risks during security audits.

Target ServiceNow Capability

- Dynamic UI Policies and Client Scripts mandating technical field validation prior to submission.
- Flow Designer trigger rules for auto-assignment to specific Network Fulfillment Groups.

PERSONA 03: IT Security & Operations Manager

IT Manager / Compliance Officer

Operational Role & System Interaction

Oversees security authorization, enforces compliance policies, monitors SLA performance, and manages team workload via Executive Dashboards.

Current Bottlenecks & Operational Risks

- Unrecorded access grants and approvals buried in individual email accounts create audit gaps.
- Lack of real-time operational metrics to detect bottleneck approval stages or overdue tickets.
- Onability to strictly enforce Role-Based Access Control (RBAC) on sensitive network modifications.

Target ServiceNow Capability

- Automated Flow Designer multi-level approval engines with immutable audit logs (sys_audit).
- Performance Analytics and Report Dashboards tracking active SLAs and breach counts.
- Role-Based Access Control (RBAC) via User Roles and Access Control Lists (ACLs).

3. Process Transformation Summary

The transition from manual email communication to ServiceNow platform orchestration standardizes operations across all three stakeholder levels:
